

Making AVs Safe Enough for Real-World Deployment

Edge Case is the trusted safety partner for companies developing and deploying autonomous vehicles (AVs) and advanced driver-assistance systems (ADAS). We help teams reduce risk exposure, navigate evolving safety standards, and accelerate deployment with confidence.

(WHAT WE DELIVER)

DevSafeOps™ for AV Innovation

We build scalable, standards-aligned safety programs tailored to the complexity of AV and ADAS systems.

-  **Safety Case Development (UL 4600, ISO 26262, SOTIF)**
-  **Operational Risk Assessment & Hazard Analysis**
-  **Certification & Regulatory Compliance Support**
-  **Safety Technology Designed for Complex AV Scenarios**

(THE OUTCOME)

Confident, Compliant AV Deployment

With Edge Case, AV developers gain more than compliance. They gain operational assurance, strategic clarity, and a competitive advantage in bringing autonomy to market.

- ✓ **Faster Time to Market** through proactive safety integration
- ✓ **Lower Risk Exposure** via early detection and continuous validation
- ✓ **Reliable Real-World** Performance under unexpected conditions
- ✓ **Stronger Market Position** by making safety a proven differentiator

(OUR PLATFORM)

AV Safety at Scale

Our AI-enabled platform accelerates AV safety case development and continuous risk assessment.

Centralized repository for safety evidence and system behavior

AI-Assisted Hazard and Risk Analysis

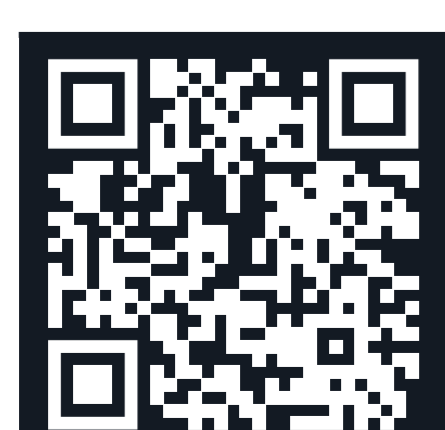

Scalable Integration for AV Testing and Operations

(WHY EDGE CASE)

Why Edge Case for AV?

Edge Case brings unmatched expertise to the safety challenges of autonomous vehicles and ADAS. Our team:

-  **Leaders in applying and shaping AV safety standards, including UL 4600, ISO 26262, and SOTIF**
-  **Expertise in safety case development, hazard analysis, and operational risk modeling**
-  **Proven track record of results across ground mobility, defense, and commercial AV platforms**
-  **Trusted partner for teams accelerating deployment with confidence while ensuring real-world operational assurance**
